There are countless bend curves for masts so the 3 popular types, Hard Top, Constant Curve and Flex Top are merely classifications with broad behaviours rather than specific, quoted tolerances. We've carefully developed our models to ensure that most popular sail brands' products are covered, but cannot ultimately be held responsible for any compatibility issues that arise from specific products or models or for any misinterpretation of the Mast Selector Matrix Tool. **All mast are covered by a 1 year unconditional warranty term.**

Unifiber Mast Selector v2017.1. Latest and previous season versions available at www.unifiber.net

Unifiber values are based on averages. For precise bend curve and production tolerance data always check with individual brands and visit unifiber.net for definitions of these terms.
